

Install Instructions

Thank you for using our AFO 3D application! Here are some instructions for installing our application onto your computer. The AFO3D program needs a MatLab compiler to work properly. This program has been provided in the application; however, it needs to be extracted and fully installed, which can take up to 10 minutes.

First, download the AFO3D_install program onto your computer and double click on its icon.

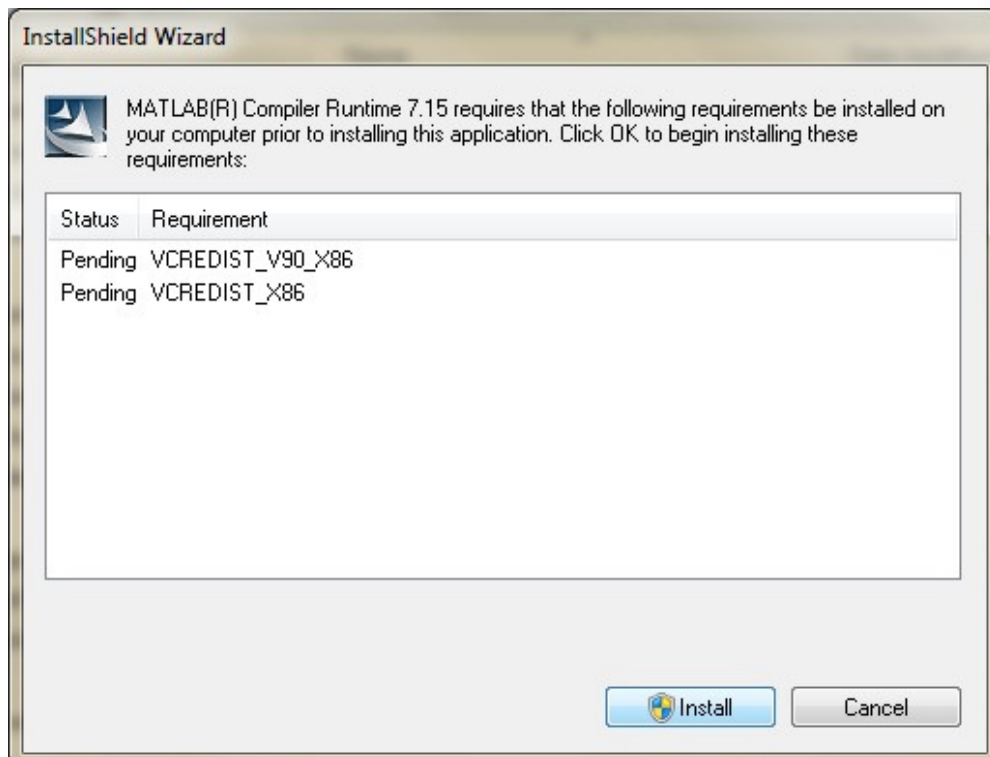

A black DOS prompt window will come up.

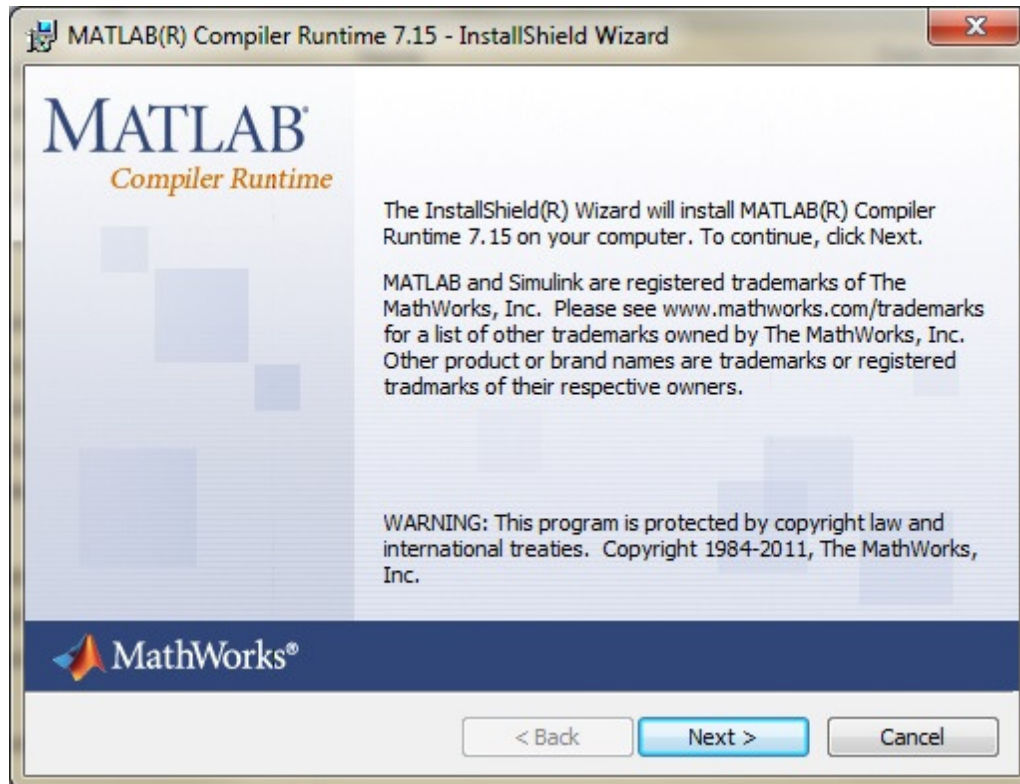

```
C:\Users\Kerice\Downloads\AFO3D_install.exe
MWUnZipSFX 5.41 of 16 April 2000, by Info-ZIP. Modified by The MathWorks, Inc.
Send bug reports to support@mathworks.com.
  inflating: _install.bat
  inflating: MCRIInstaller.exe
  inflating: readme.txt
  inflating: AFO3D.exe

C:\Users\Kerice\Downloads>ECHO OFF
Deploying project AFO3D
Running MCRIInstaller
-
```

The program will now start downloading the MatLab Compiler. Depending on what other programs are installed on your computer, the compiler may need to download additional files to your computer. These files, which may include VCREDIST_V90VX86 and VCREDIST_X86, expand the capabilities of software on your computer so that it can run the AFO3D program. You can find out more about VCREDIST_V90VX86 and VCREDIST_X86 [here](#). Click Install to continue.

Continue to follow the prompts for the MRTC installer.

Once it has finished, click on the AFO3D icon to open the AFO3D app.
